DETAILED ACTION

Continued Prosecution Application

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 24, 2003 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 6, 7, 11, 12, 16, 17, 21, 22, 26 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Levi et al (US 6,137,656). Figures 2 of Levi et al shows slider body 16 having first and second rails extending in a longitudinal direction along body 16 where leading edges of the rails are spaced from leading edge 28 of body 16. First structure 70 has a first depth and extends from edge 28 of body 16 to the leading edges of the first and second rails and between the first and second rails. Second structure 46 has a second depth disposed adjacent to the first structure and between the first and second rails. The second depth is lower than the first

Art Unit: 2652

depth and structure 46 begins more than one-third of the length of body 16 from edge 28 of body 16.

A compression pad is disposed approximately to a trailing edge of body 16. The pad has a height equal to a height of the first and second rails and the pad includes third structure 72 having a depth equal to the first depth. Furthermore, the first and second rails are generally closer to one another near the leading edge than near the trailing edge.

Response to Arguments

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
